American Cyber Achieves NIST 800-171 Cybersecurity Compliance

American Cyber announced it has completed all requirements set by the National Institute of Standards and Technology's (NIST) 800-171 cybersecurity standards, and passed a comprehensive compliance audit as of November 2019.

As part of the Government's continual emphasis on addressing cybersecurity threats, the U.S. Department of Defense recently published supplemental rules requiring Government contractors to implement cybersecurity measures set by the National Institute of Standards and Technology's (NIST) Special Publication (SP) 800-171. The standard defines how to safeguard and distribute material that is deemed sensitive, but not classified.

The extensive NIST compliance audit, conducted by a leading industry third party, deemed American Cyber's security controls for sensitive data as being fully compliant with the NIST standard, ensuring that security controls and processes are in place and implemented to protect the Government's sensitive data.

"Given our partnerships with some of the most important Government, industry and academic organizations in the world for nearly a decade, we are proud to have completed all the initiatives required by these cybersecurity rules and standards." said Gary Winkler, President of American Cyber.

"Keeping our customers' information safe and secure is extremely important to us. We continually strive to provide dependable innovation for our customers and respect the level of trust they have in us," Winkler continued.

About American Cyber

American Cyber is an award winning Women-Owned Small Business supporting U.S. Government projects across the globe by identifying, implementing, and integrating leading-edge technology solutions. American Cyber serves customers with a quality and process-based focus per the company's International Standard Organization (ISO) Certifications in Quality Management, Information Technology Services Management and Information Security Management and CMMI Level 3 rating for Services. American Cyber's awards include Inc. 5000 designation, Virginia Chamber of Commerce's "Fantastic 50", Washington Technology's "Fast 50", SmartCEO Magazine's GovStar Awards for Best

Emerging Company and Protégé of the Year, and the DoD Nunn-Perry Award. For more information, please visit our web site at www.AmericanCyber.com.
