American Cyber and Plurilock Form Strategic Alliance

**Plurilock's biometric authentication software provides
expanded Cyber security service offerings and data protection to clients**

CLIFTON, VA – (October 2018) – American Cyber, a C4ISR and Cyber solutions company in Clifton, VA, has announced a technology and go-to-market partnership with Plurilock to introduce pioneering biometrically driven security software that verifies the identities of authorized users regardless of credentials used to access systems.

"Plurilock provides state-of-the-art biometric systems for endpoint authentication, detection and response by identifying invisible micro-patterns in users' keystrokes and mouse movements," explains Gary Winkler, President of American Cyber. "These behavioral signatures are compared to users' activity, enabling the software to detect anomalies and unauthorized activity. And all this is done in the background without any impact on users.

"As the number and sophistication of cyber-attacks on networks increase, we are continually upgrading cyber security systems to protect our networks. This cutting-edge technology provides real-time endpoint visibility and human telemetry for biometric analysis, the ultimate in network security," Winkler continues.

"As one of our premier technology partners, Plurilock's state-of-the-art technology will revolutionize how customers securely access data on their networks," he concluded.

About American Cyber

American Cyber focuses on integrating innovative capabilities into Government operations and systems. The company has decades of experience leading transformational C4ISR and Cyber initiatives in support of National Security missions. American Cyber identifies, implements, and integrates the latest proven technology solutions based upon its unique insight into the needs and processes of the U.S. Government, along with specialized knowledge in all aspects of C4ISR and Cyber technologies. Their ability to solve any challenge from network gateways to end-users, including mobile device challenges, allows American Cyber to offer Solutions with Velocity. American Cyber is a quality-focused organization and is CMMI Level 3, and ISO 20000, 27000, and 9000 rated. For more information on American Cyber go to http://www.americancyber.com

About Plurilock

Plurilock develops state-of-the-art biometric solutions for network security. Plurilock's cyber security suite includes Plurilock Aware, which allows organizations to identify users through the patterns of their keystrokes and mouse movements; and Plurilock Defend, which provides continuous, invisible endpoint and detection response (EDR) against identity threats. Specifically, Plurilock Aware integrates with existing systems and monitors users' behavior to provide identity risk scores, while Plurilock Defend provides a continuous EDR solution for workplace identity threats. Plurilock has contracts with the DoD, the Department of Homeland Security, and financial and health organizations worldwide. Plurilock is a privately held corporation with offices in Victoria, British Columbia; New York; and Baltimore.
